

# Excel 2007/2010 PivotTables

<b>Audience</b>	This course is appropriate for users who know the spreadsheet techniques of Excel 2007/2010. Users should be able to use the basics of Excel and in addition know how to create absolute and mixed cell references; use functions; work with multiple sheets in a workbook; freeze titles; set print titles and page breaks; create names; link worksheets and workbooks. It would be helpful, but not required, to have taken the Excel Level 2.
<b>Description</b>	The course uses a combination of lecture, hands-on practice, and independent exercises to familiarize students with list design, PivotTables, and PivotCharts in Excel. You will first learn how to create a list suitable for use in PivotTables. Then, you will learn to take the information from a list (or spreadsheet) and create PivotTables and PivotCharts. These tools provide the Excel user with methods to quickly analyze information for decision making. The PivotTable rearranges and summarizes the data from a database or spreadsheet automatically into categories chosen by the user. For example, a list of customers and the products they buy can be analyzed to display product totals by customer or by region. With a few minor changes to the PivotTable, customer purchases can be analyzed by product. PivotCharts display these analyses in a chart format.
<b>Objectives</b>	After completing the class, students should be able to: <ul style="list-style-type: none"><li>■ Create a list suitable for use in PivotTables</li><li>■ Edit data through the data form or the worksheet</li><li>■ Sort and number a list</li><li>■ Create PivotTables</li><li>■ Edit and total PivotTables</li><li>■ Change calculations and format PivotTables</li><li>■ Group and hide data in PivotTables</li><li>■ Create a PivotChart</li></ul>
<b>Length</b>	½ day

---

## I. Creating a Data List

A. Recognizing a Data List

B. Creating a Data List

C. Editing a Data List using a Form

D. Converting Data Lists to an Excel Table

E. Creating Formulas in an Excel Table

F. Sorting a List in an Excel Table

G. Numbering the Excel Table

## **II. PivotTables and PivotCharts**

- A. What is a PivotTable or PivotChart?
- B. Creating a PivotTable
- C. Modifying a PivotTable Layout
- D. Changing PivotTable Appearance and Subtotals
- E. Controlling PivotTable Calculation and Formatting
- F. Grouping and Sorting PivotTable Fields
- G. Creating PivotCharts
